AMENDMENTS TO THE CLAIMS:

1. (Currently Amended) A light reflector for personal items comprising a light reflective base plate having a front surface for receiving and reflecting incident light and a back surface on which at least one light reflecting cone is formed.
2. (Currently Amended) The light reflector as claimed in Claim 1, wherein the reflecting cone is raised on [[a]] the back surface of the base plate.
3. (Original) The light reflector as claimed in Claim 1, wherein the reflecting cone is comprised of a number of flat faces of different angular orientations.
4. (Original) The light reflector as claimed in Claim 1 further comprising a mount wall extending from the base plate.
5. (Original) The light reflector as claimed in Claim 1 further comprising a light non-transmitting layer formed on a surface of the reflector.
6. (Original) The light reflector as claimed in Claim 1 further comprising a circumferential side wall extending from the base plate and forming an open end to which a lid is removably mounted.
7. (Original) The light reflector as claimed in Claim 7, wherein a light non-transmitting layer is formed on the base plate and the side wall for preventing reflected light to disperse.
8. (Currently Amended) The light reflector as claimed in Claim 1, wherein the base plate is bent to form a cylinder having an inside the back surface defining an interior
